# Abstract

A safe and secure platform for whistleblowers to expose the misdeeds of organizations secured by the primary fundamental of blockchain, i.e. anonymity.

**Generally, there is a fear of being exposed and subject to legal actions but with blockchain their identity is kept secret and they can do this without the fear of getting exposed.**

So, we are bringing in this unique platform of ours where anonymity is the main goal, securing the identity of whistle blower to the extent that even we as developers dont have access to their identity.

**NOVELTY**

# TECH- STACK

- Solidity
- Ethereum blockchain
- HTML/CSS/BOOTSTRAP
- NodeJS
- Express

# IMPLEMENTATION

- 1) Creating frontend.
- 2) Linking frontend with backend.
- 3) Creating a smart contract.
- 4) Linking smart contract with backend.
- 5) Debugging

- The whistleblower will be sending the document and payment to the organisation. Then the organisation will do a free transaction of data to media outlet.
- Then the media outlet's duty will be to verify if the received news is genuine or not.
- If the news is genuine, then the media outlet will send a notification to organisation, and then the amount will be returned to whistleblower.
- But if the information is fake, organisation will keep the money and it will be used for technical purposes.

# BUSINESS SCOPE

1

Will be developing the product as an non-profit organization. Hence we are not aiming at a business scope from our project.

2

Although we will aim to generate basic revenue with the aim to cover the technological cost of hosting and deploying our web.

3

Our only aim is to motivate the whistleblowers to stand against the wrong and rewarding them with incentives anonymously.

# Thank you!
